

MOCKUP 7 — ON/OFF Work-Conserving Fairness Plane

Fairness follows active demand rather than forcing equal service

Workload: identical 32-frame requests; A offers 0.25C for 30 s ON then 0 for 30 s OFF; B remains backlogged; total target utilization is 100%.

Demand-aware score: $F_s = 100 \left(1 - \frac{\sum_i |S_i^s - S_i^{s,*}|}{2 \sum_i S_i^{s,*}} \right)$, where $S_i^{s,*}$ is the work-conserving max-min target.

Illustrative mockup—not measured results. Single-stage ablations protect only their controlled stage.
