

MOCKUP 12 — Work Conservation Under ON/OFF Demand

Fair sharing does not reserve unused capacity for an idle tenant

Workload: identical 32-frame requests. A offers 0.25C for 30 s ON and zero for 30 s OFF; B remains backlogged. The dashed total should remain at 1.0.

Illustrative mockup—not measured results. When A is idle, B receives the released capacity instead of leaving the stage idle.
